

DB Navigator: My perfect travelling companion

The perfect travelling companion can give you real-time information even when you're on the move: DB Navigator

If you have a question about your journey while you're in the middle of travelling, the DB Navigator app is just what you need. Using the **"My Trip"** option, you always have a clear, **real-time** overview of your train journey's details such as **platform numbers, departure times and arrival times.**

The app shows the **coach sequence of your train**, putting an end to confusion on the platform as you try to find the right spot to board. Now, it's clear what sections of a platform an ICE service's first- and second-class carriages are located at.

New: Travel without interruptions from train crewmembers. When you catch an ICE, the Komfort Check-in function lets you use your journey time just the way you want, i.e. for relaxing or working.

Did you buy your **ticket plus reservation** for a **trip** on an **ICE service as an online ticket and/or mobile phone ticket** via your **LCC business travel centre**? Then try out our new customer service and **check yourself in** using the **DB Navigator app.**
